NOTE		① All measurements which not mentioned are based on 230VAC input, output Max at ambient 25°C / 70%RH			
		② Output tolerance included set up voltage, line regulation and load regulation.			
		③ Ripple & noise are measured at 100~254VAC input with 10~50°C condition and 20MHz of bandwidth by using a 10" ~15" twisted pair-wire terminated with a 0.1uF & a 47uF parallel capacitor.			
		④ The operating temperature shall follow the de-rating curve in spec The output load may be requested for decreasing as de-rating curve in spec when low input voltage is under 100VAC.			
		⑤ The power supply is considered a component of end-equipment. The end-equipment must be re-confirmed whether comply with EMC directives.			
		⑥ The ambient temperature should be de-rating by 5°C/100m, when operating altitude higher than 2000m (6500 ft)
