## SPU61A series

60W External Power Supply for General Purpose

SPECIFICATION NOTE :

1. Output can provide up to peak load when the power supply starts up. Continuous staying in more than rated load is not allowed.
2. At factory, in $60 \%$ rated load condition, each output is checked to be within voltage accuracy.
3. Line regulation is defined by changing $\pm 10 \%$ of input voltage from nominal line at rated load.
4. Load regulation is defined by changing $\pm 40 \%$ of measured output load from $60 \%$ rated load.
5. The ripple is measured from peak to peak with a bandwidth-limit of 20 MHz (Measured at the output connector with a 0.1 uF ceramic capacitor and a 47uF electrolytic capacitor).
6. Hold up time is measured from the end of the last charging pulse to the time which the main output drops down to low limit of main output at rated load and nominal line.
7. Efficiency is measured at rated load, and nominal line.

MECHANICAL DIMENSIONS: ( UNIT: mm [inch] )
